

**PRESS RELEASE  
FOR IMMEDIATE RELEASE**

**Telecorp Inc. Considers Acquisitions**

**Company Targets Leadership Position in Automated CRM Market**

**Barrie, ON, September 22, 2008/PRNewswire – Telecorp, Inc.** a leading provider of communication solutions; is currently reviewing prospective company acquisitions in order to further expand global reach.

Telecorp is confident that integration with once peripheral and linear counterparts will undoubtedly result in substantial growth within the overall corporation.

At this time, the initial aim is to amalgamate core counterparts of the existing software with those of a staffing software system based in United Kingdom. Telecorp is secure that the unification of these systems will provide the structurally sound framework required to construct a truly unique and utilitarian product. The staffing system referred to is an operational and functional software platform. This blended system will result in the ability to easily employ and perform key functions, capabilities, and tasks, actively implemented in existing permanent and/or temporary staffing companies. This added module to the Sales Generator and iConnects system will be an external project which will have no effect on, or impose any threat to, the overall infrastructure or business plan previously in place.

“It is clear that this opportunity will allow Telecorp to play a key role in the staffing field,” said Paul Phillips President of Telecorp Inc. “We have already secured a number of offices in Canada and United States to test and assess the total package. Telecorp’s vision will reduce overall offices costs by offering a uniquely efficient set of communication tools that no other staffing company or software offers at this date.” The proposed system will implement tools that will aide personnel on all levels including, sales, administration, and marketing.

“What Telecorp will offer in 2009, could revolutionize our industry,” says Jonathan Gorecki, General Manager of Ultimate Staffing Solutions. “There is an overwhelming demand for tools that can effectively, efficiently and reliably automate our industry.”

Telecorp is also actively pursuing partnerships with; database management and storage companies housed in Finland and China; a software encryption company located in Europe and a Michigan based outfit targeting the development of medical management systems similar to the staffing software.

Both the staffing and the encryption software system projects; are scheduled for completion in the fall of 2008. Telecorp will issue detailed press releases as acquisitions occur.
